3000w off grid solar system New Caledonia

How much does a 3000W Solar System cost?
A 3000W solar system costs $6000-$8000. This does not include the installation cost,though homes that install solar panels are entitled to various tax credits and rebates. As to how long before this investment pays off,it can be from 7-20 years. The reason for the wide range is electrical usage varies greatly.

How many solar panels do you need to run a 3000W system?
Actually you will need 15 solar panelsto run a 3000W system. Here's why. Solar panel ratings are based on peak output. So when a panel is rated at 250 watts,that is peak performance. But orientation,location,panel angle,sunlight availability affect the results. Bottom line is,solar panels don't always reach peak output.

What inverter do I need for a 3000W Solar System?
In a 3000W solar system you need at least a 3000W inverter. However,inverters are not 100% efficient so you need to account for this. To be safe,the inverter should be 125% of the system's load. With a 3000W solar panel that would be 3750W. The Giandel 4000W Pure Sine Wave inverter will do nicely here.
