From what I was told the Sunny Islands have a max of 50amps & 5kwh storage per unit. Which means if I wanted to add another 5kwh of battiers, I would need to purchase another Sunny Island. The cost to do that + add batteries would be significantly more than a generator or a powerwall.

The Powerwall will have quite a long payback, probably over 15yrs, but if you have the cash spare would be a good idea. However, using it to charge an EV overnight isn"t its best use since it only stores 13.5kWh and I think your car"s battery is about 50kWh.

UL9540 and UL9540(a) large scale fire testing are integral parts of NFPA 855, the building code which governs lithium batteries. Unlike the traditional 3 year adoption process for NEC, jurisdictions are enforcing NFPA855 requirements as quickly as they are enacted. This hour will focus specifically on what goes into UL9540 listings as well as how to read a UL9540a fire test ...
