An electrical cabinet cooler is a device designed to properly control the temperature within cabinets where electronic equipment or machinery is housed. Using compressed air alone, it can provide effective cooling, protecting heat-sensitive equipment from malfunction or damage caused by overheating. Furthermore, the pressurized cooling air ...

Electric coolers use Peltier effect coolers to try to keep the interior of the cooler cold. The problem is they are just a cool plate that is 40*F colder than the ambient temperature, which means when you transfer that heat to the interior of the container, you"re realistically looking at holding things 20-30 degrees colder than the outside ...
