Pitcairn Islands solution solar

Can solar energy replace fossil fuels on Pitcairn Island?
Pitcairn's authorities have launched a renewable energy project designed to replace fossil fuels with solar energy. The goal is to replace 95%of the current diesel consumption on Pitcairn Island (75,000 liters per year) with a combination of energy saving and solar electricity through the installation of a hybrid photovoltaic solar energy system.

Are the Pitcairn Islands Green?
Pitcairn Islands, a group of five islands with a total area of 47 km2 and which constitute one of the most remote archipelagos in the world, turn to safer, greener energies that best meet the needs of the population. Pitcairn's authorities have launched a renewable energy project designed to replace fossil fuels with solar energy.

Does Oceania have solar energy?
The preceding maps of Solar radiation (Solargis) and Wind energy (Global Wind Atlas) show that Oceania is able to be roughly split into regions close to the Equator and those farther away with different amounts of Solar radiation and ranges of Mean Wind Speeds. Solar Power appears to be the most significant source of Renewable Energy at this time.

Can solar panels help reduce wind lulls in Samoa?
Both solutions could be installed to improve resilience, e.g. the 550 kW Wind Turbine (2 x 275 kW) site below in Samoa could easily have Solar PV panels installed on the same site to help provide electrical power in cases of wind lulls.
