Any solar investment in Sri Lanka takes minimum five year recovery period, which is a very good term compared to Europe and most other countries. This advantage is due to higher energy density we get from the sun.

It typically consists of solar panels, batteries, and inverters. The solar panels generate electricity, which is stored in batteries for later use. The batteries are used to store excess electricity generated by solar panels during the day, which can then be used to provide power at night when solar generation is not available.
