The only downside is that you have to get 48 V batteries with the 5.5kw while you can easily find a 24v 3.5kw inverter (you can find 24V 5.5kw but it"s terrible to get them as the charging current and discharging current of the batteries will kill them as it"s twice as much as the current of 48V batteries with the same load)

In some developed countries, you don"t even need batteries because you can rely on the grid being always available, and, most importantly, when your panels produce more power than you are consuming, the system can send the extra power to the grid to be used by nearby houses, and that deducts watt-hours from your electricity bill.
