# Workbench energy Finland

Who is Workbench energy?

Workbench Energy is the trusted partner of a range of energy storage types and configurations. On-site energy storage systems utilize the NRG Peaks storage specific alerts for peak load events,access demand response revenue,earn operating reserve revenue,and measure carbon impacts in a seamless service.

How does Workbench energy work?

Finding the right balance to maximize earnings while limiting facility downtime is what Workbench Energy's software and services are designed to do. No facility is identical so Workbench Energy offers flexible tool configuration and service support to make sure your energy programs match the needs of your company.

What is Finland's Energy Policy?

Finland's approach includes nuclear energy, more renewables for electricity and heat, improved energy efficiency, and economy-wide electrification. After Russia's 2022 invasion of Ukraine, Finland moved to cut Russian energy imports, which previously comprised 81% of crude oil, 75% of natural gas, and 19% of electricity imports in 2021.

How does Workbench's market dashboard work?

Subscribers of Workbench's market dashboard have electricity system data at their fingertips with easy integrations of private facility reports. Our market services team can optimize market strategies while our 24/7 real-time desk can execute on the plan with our team of market operation specialists.

Why did Finland cut Russia's energy imports in 2022?

After Russia's 2022 invasion of Ukraine,Finland moved to cut Russian energy imports,which previously comprised 81% of crude oil,75% of natural gas,and 19% of electricity imports in 2021. The country's energy shift is highlighted by launching Europe's first new nuclear reactor in 15 years in April 2023 and expanding onshore wind power.

What is Finland's energy consumption?

Finland's per capitaenergy consumption is notably high,driven by its heavy industry sector and significant heating requirements due to its cold climate. In 2021,the industrial sector was the primary consumer of energy,accounting for 52% of Total Final Consumption (TFC)--above the International Energy Agency (IEA) average of 36%.
